Why Schneider Electric?

Planning your IT Infrastructure

Application Scenarios

Typical Application Configurations

Schneider Electric Partner Benefits

Why Schneider Electric?

Designing and deploying IT infrastructure can be a complex and demanding process. From intricate configurations and tailored designs to rapid deployment timelines, evolving customer expectations, and managing multiple vendors — we understand the challenges you face.

At Schneider Electric, we're here to simplify that journey.

As your trusted partner, we offer comprehensive IT solutions — from power and cooling to complete infrastructure integration — enabling you to deliver reliable, efficient, and sustainable solutions to your customers.

Whatever your needs, we've got you covered.

Planning your IT Infrastructure

Let's start by outlining the core components in a clear and simple way, so you can navigate the IT setup with ease.

IT Infrastructure solution

COOL

Complete your setup with cooling to maximize IT performance.

Cooling solutions

HOW DO YOU **COOL** IT?

SERVER & NETWORKING

PREVENT

Add software to simplify, secure, and optimize IT operations.

Software

HOW DO YOU **MONITOR** IT?

HOW DO YOU **PROTECT** IT?

PROTECT

Ensure operational continuity and equipment protection with a UPS.

APC UPSs

SERVICES

WHERE DO YOU **PLACE** IT?

PLACE

Choose the right racks to accommodate your IT.

APC Racks

POWER

Think of a PDU as efficient power management, not just a power supply.

APC PDUs

Every successful IT setup begins with a clear understanding of the customer's needs — it forms the foundation of your design.

Standard IT Environment

Typical application scenarios include:

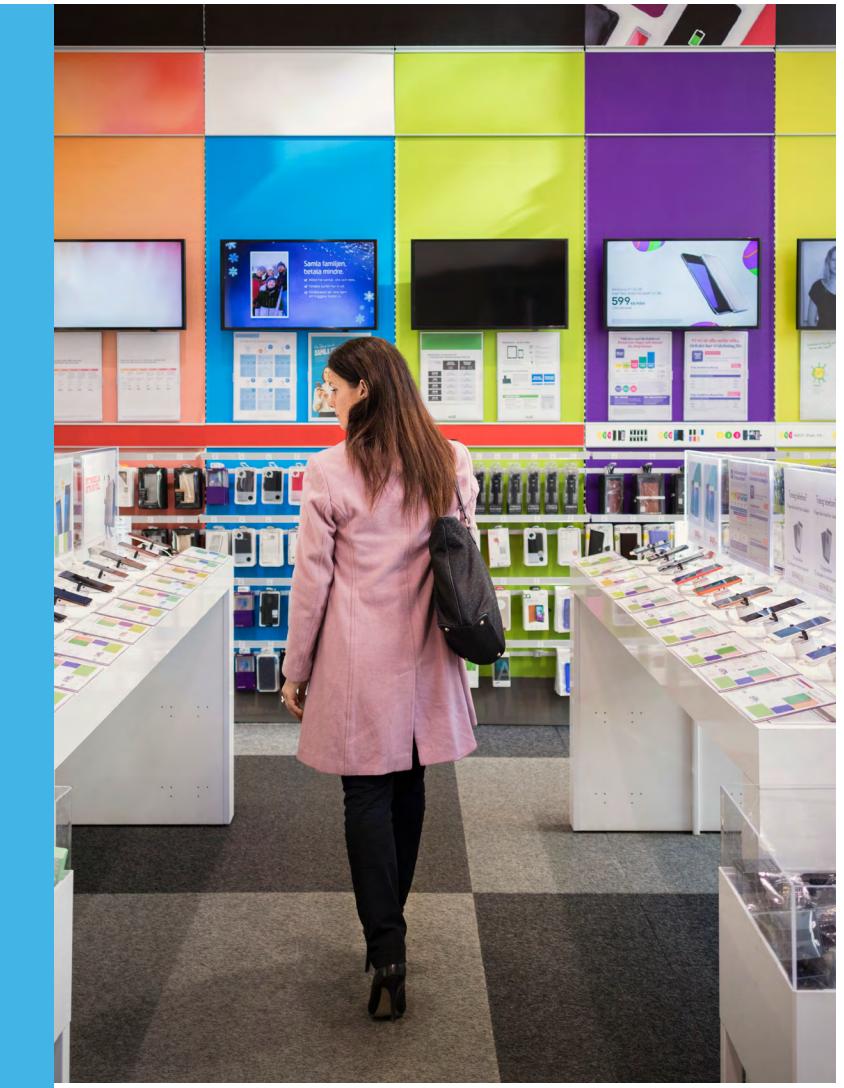

Server rooms, wiring closets and network closets.

Commercial & Tertiary Environment

Typical application scenarios include:

Open office, stock room, retail stores, automated warehouse.

Standard IT Environment

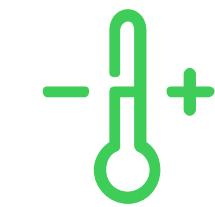

Key strategic and technical factors to consider when planning and managing IT infrastructure **in standard IT environment**.

Rack Density & Power Management

Challenge: High density equipment can cause overcrowding and poor airflow. Balancing power needs with redundancy is becoming a challenge.

Solution: Design efficient rack layouts with proper airflow and space for future growth. Use intelligent PDUs and online UPS systems with zero transfer time to ensure continuous power for critical devices.

Environmental Control & Security

Challenge: Unregulated temperature, humidity, and fire risks—combined with weak physical security—can lead to operational disruptions and increased cyber vulnerability.

Solution: Implement lockable racks, controlled PDUs, cameras, access control, centralized management and environmental monitoring.

Cooling & Ventilation

Challenge: High-performance servers generate significant heat, creating hotspots and stressing standard cooling systems.

Solution: Existing air conditioning may be insufficient - you may need to consider extra precision air conditioning.

Monitoring & Maintenance

Challenge: Limited on-site IT staff and the need for efficient remote oversight.

Solution: Centralized monitoring and management platforms, remote support tools and services, and automated alerting to ensure proactive issue resolution and minimal downtime.

Key strategic and technical factors to consider when planning and managing IT infrastructure in a commercial environment.

Limited Physical Space

Challenge: Retail areas, open offices, and small backrooms often lack dedicated server rooms.

Solution: Use compact, wall-mounted, or soundproof enclosures, slim UPS units, and plan airflow and cable routing carefully to maximize efficiency in tight spaces.

Noise Pollution

Challenge: Server fans and networking gear can be disruptive in open or customer-facing environments.

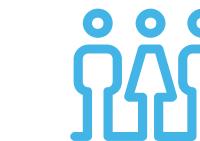

Solution: Use soundproof enclosures or relocate noisy equipment to isolated or remote areas to maintain a quiet workspace.

On site Security

Challenge: Equipment in open or shared spaces is vulnerable to tampering, theft, or unauthorized access.

Solution: Implement lockable racks, controlled PDUs, cameras, and access control systems.

Non-IT Staff

Challenge: On-site personnel may lack the expertise to respond to system alerts or perform basic IT maintenance.

Solution: Use user-friendly interfaces, centralized monitoring & management, remote support tools, and automated alerts. Consider longer-lasting li-ion UPS units, extended warranties, and vendor support services.

A photograph of two people in a server room. A woman with dark curly hair and glasses, wearing a grey sweater, points upwards while holding a laptop. A man with a beard and grey hair, wearing a blue jacket, looks up at the same point. In the background, server racks are visible.

Delivering complete
IT Infrastructure
solutions

Delivering complete IT Infrastructure solutions

From UPSs, Racks and PDUs, to cooling, software and services, **we provide the complete range of IT infrastructure solutions.**

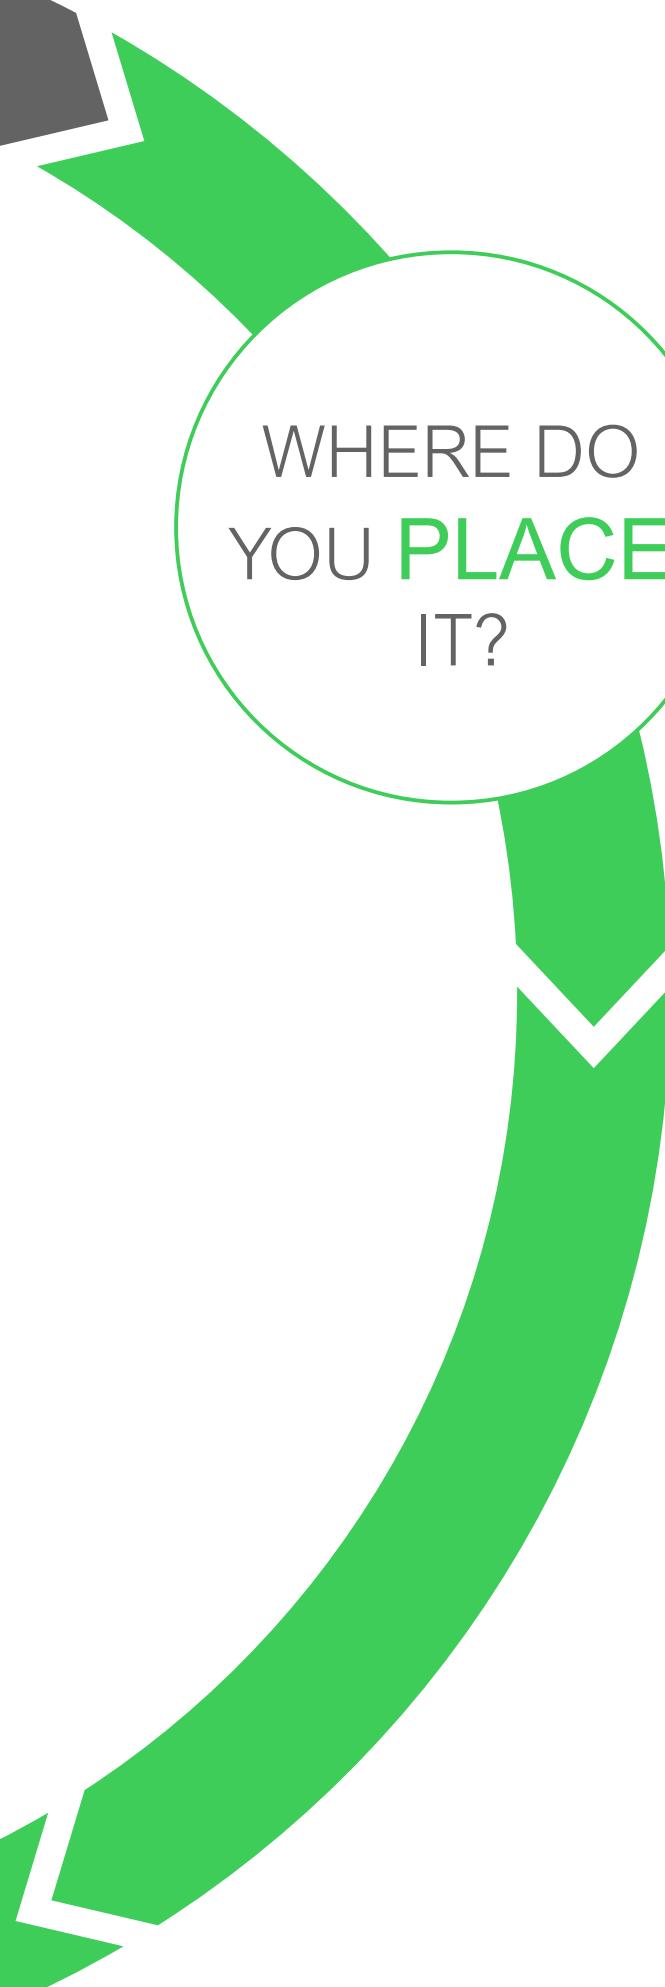

In the following section, we'll show how our solutions align with the specific needs of your customers — helping you design, deploy, and manage IT infrastructure with confidence.

Standard IT Environment

Commercial & Tertiary Environment

WHERE DO
YOU **PLACE**
IT?

PLACE

APC Racks provide a reliable foundation to organize and protect your IT infrastructure in any environment.

Some of the most common challenges when designing IT infrastructure:

Standard IT Environment

Network Closets, Server Rooms

Think Scalable, Organized, and Efficient

Challenges

Power density

Higher density equipment requires more power, airflow, security, space and weight.

Cable management

Poor organization can lead to overheating and maintenance issues.

Integration complexity

Multiple vendors can lead to compatibility issues.

Security risk

Always stays as priority, no compromise on that.

How we can help

Stronger, larger models, more computing in less space.

Advanced cable management accessories to maintain airflow and serviceability.

Vendor-neutral designs that support a wide range of IT equipment.

Lockable, secure enclosures to protect against unauthorized access.

Commercial Environment

Retail, Offices, Clinics, Schools, Stock Rooms

Think Compact, Secure, and Simple

Challenges

Limited space

IT equipment often shares space with non-IT functions.

Aesthetic concerns

Equipment must blend into customer-facing or quiet environments.

Security risks

Equipment may be in open or semi-public areas.

Environmental variability

Temperature, dust, and humidity can be unpredictable.

The cost associated with dedicated IT space.

How we can help

APC wall-mount rack solutions.

APC soundproof and aesthetic enclosures.

Lockable, secure enclosures to protect against unauthorized access + cameras and sensors.

Environmental monitoring sensors to alert on temperature or humidity changes.

Go with **micro data center**.

Check APC Racks solutions

POWER

HOW DO YOU
POWER
IT?

With **APC PDUs**, power becomes a managed resource — monitored, measured, and optimized for performance.

Some of the most common challenges when designing IT infrastructure:

Standard IT Environment

Network Closets, Server Rooms

Commercial Environment

Retail, Offices, Clinics, Schools, Stock Rooms

Think Scalable, Organized, and Efficient

Challenges

Risk of oversizing

Right balance of the IT loads on 3ph PDUs.

Prevent failures

Diagnose faulty equipment.

Risk of downtime

Tripping of circuit breakers caused by overloads.

Cyber attacks

on intelligent PDUs.

Accidental disconnection

of power cords.

Monitoring and management

of multiple remote intelligent PDUs.

How we can help

APC Metered PDUs help to monitor the power levels.

APC Metered by outlet PDU helps to find faulty equipment.

Easy configuration and monitoring of overload conditions.

3rd party **certified network management cards** (IEC 62443-4-2).

Optional locking cords to prevent accidental downtime (Netshelter PDU)

Seamless integration with EcoStruxure™ IT **for centralized management**.

Think Compact, Secure, and Simple

Challenges

Limited visibility into power usage and load status with no IT staff.

No remote access to reboot or manage connected devices.

Tight installation spaces with limited mounting options.

Cyber attacks on intelligent PDUs.

Accidental disconnection of power cords.

How we can help

APC Metered and Switched PDUs for reliable power distribution and load monitoring.

APC Switched PDUs for remote outlet control and reboot capabilities.

Compact form factors (horizontal and vertical) for flexible installation.

3rd party **certified network management cards** (IEC 62443-4-2).

Optional locking cords to prevent accidental downtime (Netshelter PDU).

Check APC PDUs solutions

HOW DO YOU
PROTECT
IT?

PROTECT

APC UPS solutions ensure continuous, efficient, and secure power — keeping your IT systems protected and always on.

Some of the most common challenges when designing IT infrastructure:

Standard IT Environment

Network Closets, Server Rooms

Think Scalable, Organized, and Efficient

Challenges

Zero disruption

Critical applications can't stop for even a second.

Runtime requirements

Need to bridge longer outages or support graceful shutdowns.

Battery management

Traditional batteries require more support and frequent replacement.

Downtime risk

Any outage can disrupt business-critical operations.

Weight and space reduction

in racks.

Peace of mind

How we can help

APC Online UPS **with zero transfer time.**

Extended runtime options with external battery packs.

Lithium-ion battery models for longer life, faster recharge, and lower TCO and extended warranty for VRLA battery options.

Predictive easy maintenance and remote diagnostics to reduce downtime risk.

APC Smart UPS Ultra - More than 15% space saving, up to 50 % lighter with 3x battery life-span.

5-year UPS and battery **warranty.**

Commercial Environment

Retail, Offices, Clinics, Schools, Stock Rooms

Think Compact, Secure, and Simple

Challenges

Space constraints

Limited space, often no dedicated IT room.

Non-technical users

Staff may not know how to respond to power issues.

Frequent power fluctuations

Sensitive equipment needs clean, reliable power.

Maintenance difficulties

Remote or distributed sites are hard to service.

Cybersecurity risk

Network-connected UPS units can be vulnerable if not secured.

Connectivity

Integration to existing platforms.

How we can help

Compact, wall-mountable, super slim APC UPS units for tight spaces.

User-friendly LCD interfaces and automated shutdown software.

Line-interactive and online models for **clean, consistent power.**

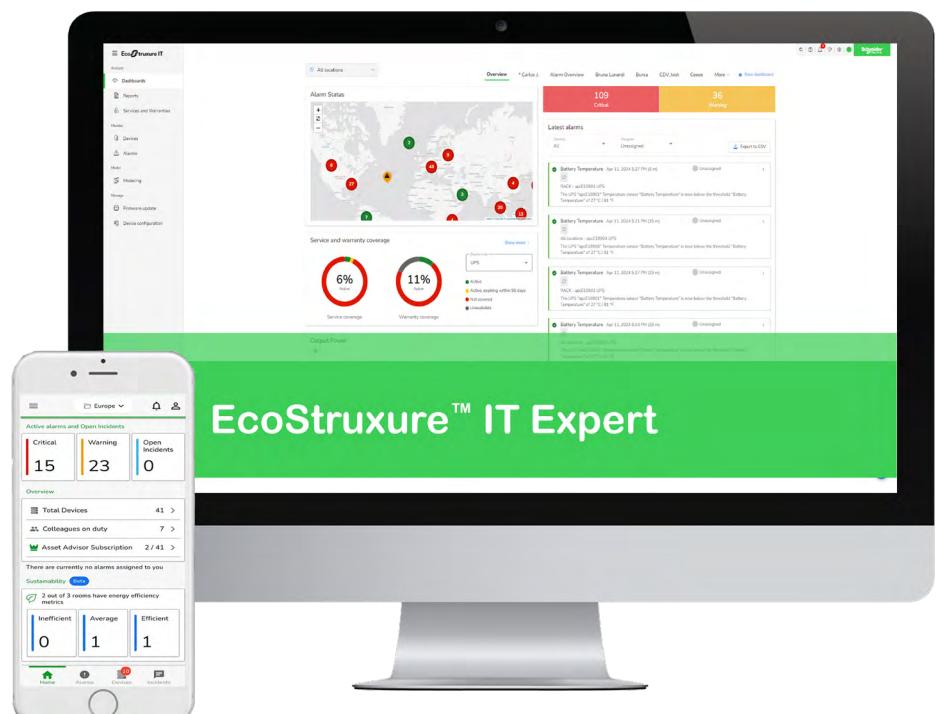

Li-ion options with longer battery life and lower TCO and remote monitoring options.

Secure network management cards/SNS to protect from cybersecurity risks.

Integrated in the device or optional **network management cards.**

Check APC UPS solution

HOW DO YOU
MONITOR
IT?

PREVENT

Our **software** simplifies complex IT environments by bringing every site into view — securely and seamlessly.

Some of the most common challenges when designing IT infrastructure:

Standard IT Environment

Network Closets, Server Rooms

Think Scalable, Organized, and Efficient

Challenges

Complex infrastructure

Multiple devices, vendors, and systems to monitor.

Reactive maintenance

Failures are often addressed after they occur.

Scalability issues

Difficult to manage growing infrastructure without automation.

Cybersecurity risks

Device vulnerabilities, running on old firmware versions.

Business continuity risk

Potential data loss or corruption during a power outage.

How we can help

EcoStruxure™ IT:

Unified vendor-neutral platforms for centralized monitoring and management.

Predictive maintenance and analytics:

Reduce downtime and improve planning.

Scalable architecture:

Grows with your infrastructure, from edge to core.

Mitigate security and failure risks :

Notifications, simple process for mass firmware updates.

Graceful, unattended shutdown

Reducing downtime and protecting data.

Commercial Environment

Retail, Offices, Clinics, Schools, Stock Rooms

Think Compact, Secure, and Simple

Challenges

Lack of on-site IT staff, multiple devices, locations

No personnel available to monitor or respond to alerts in real time.

Manual processes

Relying on local checks or basic tools increases risk of downtime.

No centralized control

Difficult to manage multiple sites from a single interface.

Security concerns

Unmonitored systems are more vulnerable to physical or cyber threats.

Business continuity risk

Potential data loss or corruption during a power outage.

How we can help

EcoStruxure™ IT:

Provides cloud-based monitoring platform for real-time visibility across distributed sites with limited IT staff.

Automated alerts and predictive analytics:

Help prevent failures before they happen.

Network-based secure remote monitoring and visibility

for all connected devices.

Highest level of security certification

in the industry: IEC 62443-4-2 SL2 (Independent certification).

Check DCIM solutions

HOW DO YOU
COOL
IT?

COOL

Our **cooling** expertise completes your IT infrastructure — so you can deliver an end-to-end solution with confidence.

At Schneider Electric, we have the expertise to handle your IT cooling needs—from simple InRow and Aisle containment solutions to fully customized, high-density deployments and liquid cooling. Our [Motivair solutions](#), including liquid to liquid coolant distribution unit and rear door heat exchanger, are designed to meet the demands of today's most power-dense IT environments, ensuring optimal performance and energy efficiency.

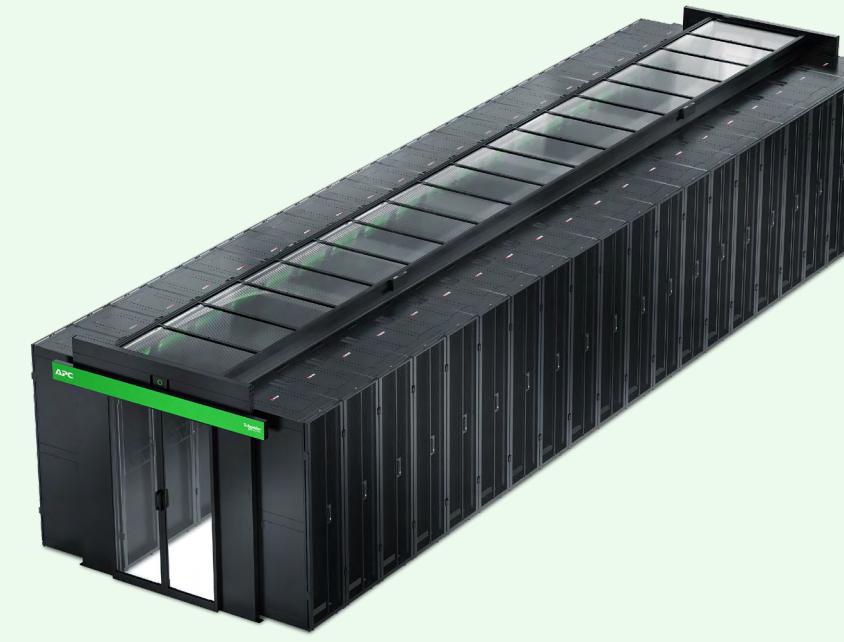

So, whether you're just getting started, or you need an advanced cooling solution, we're here to support you, every step of the way.

We offer **InRow cooling** as part of our data center infrastructure solutions. This technology places cooling units directly between server racks, targeting heat at the source.

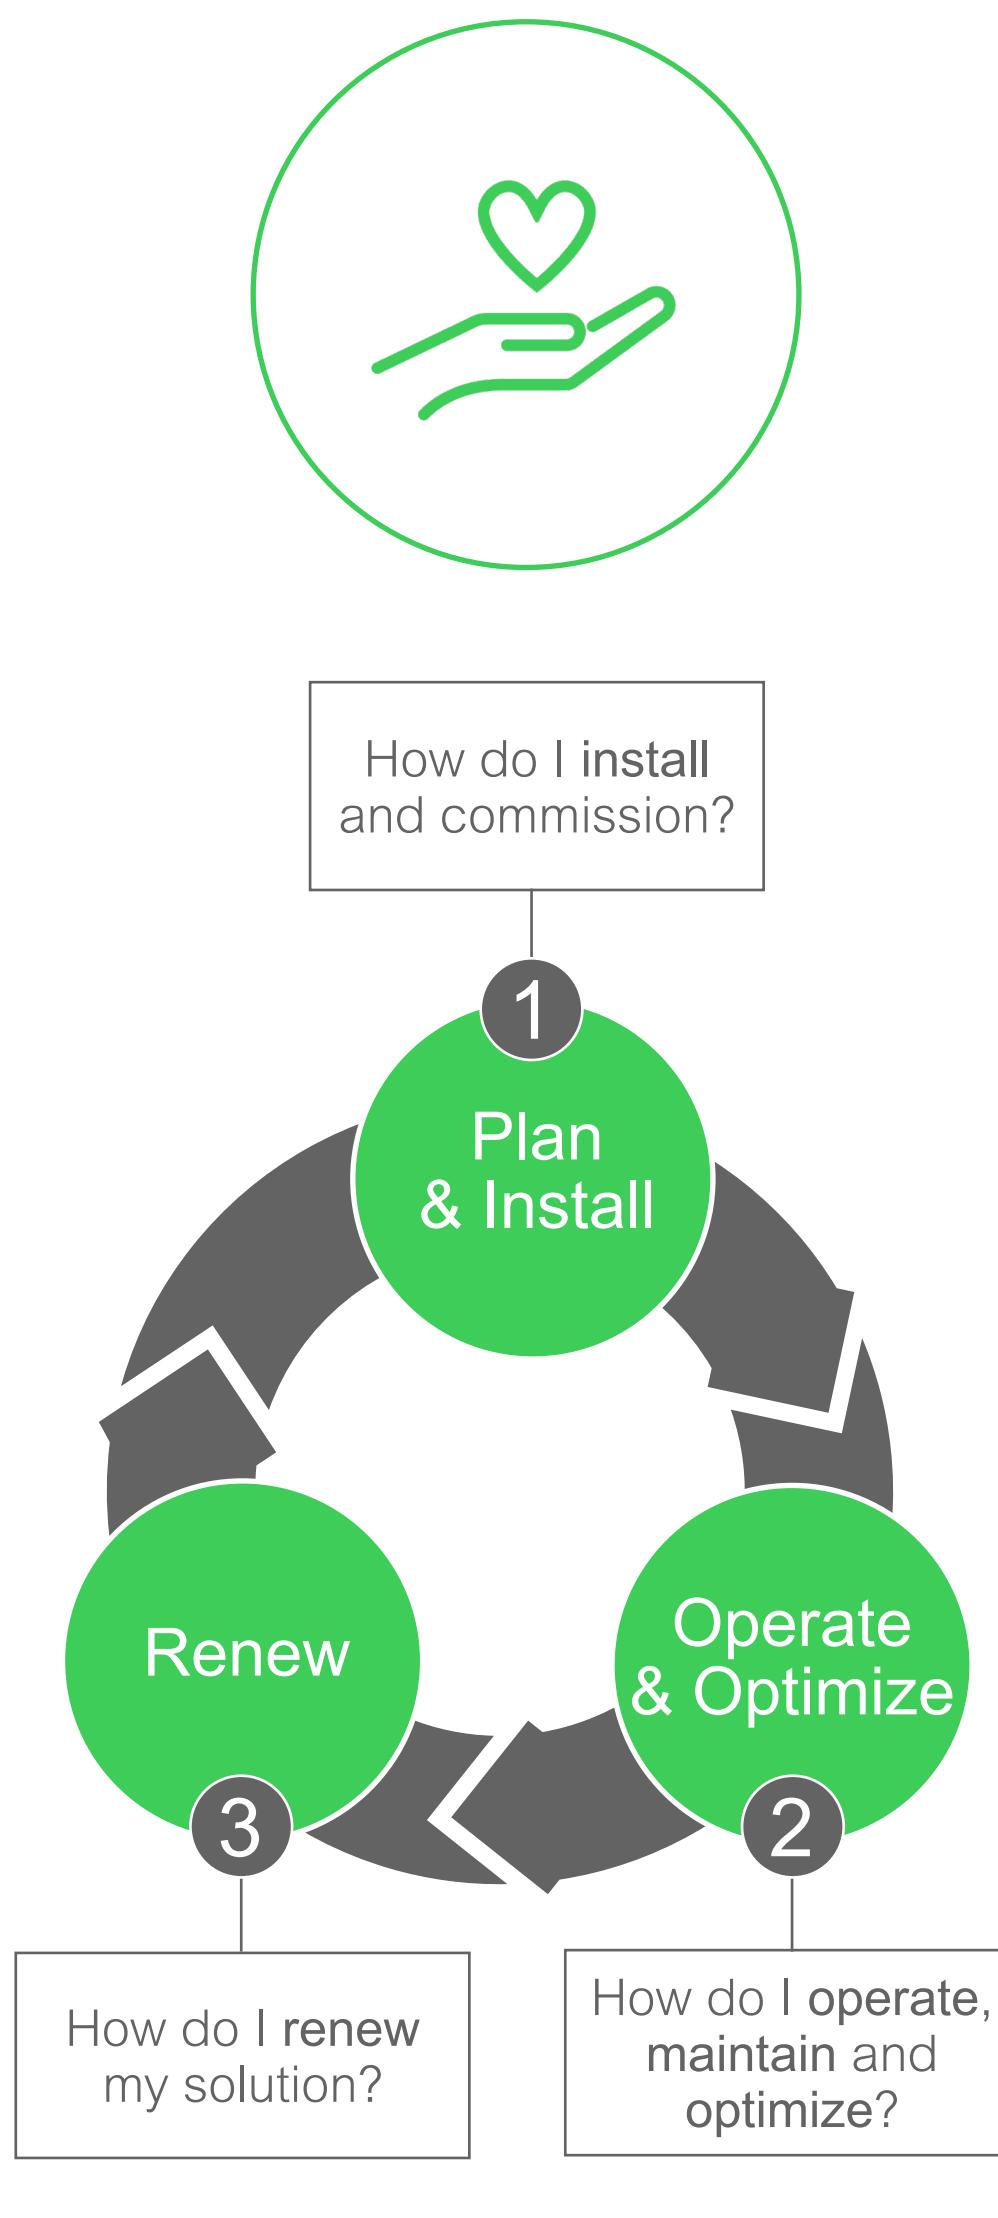

[Check Cooling solutions](#)

We provide **Aisle containment** solutions to help optimize airflow in data centers. By separating hot and cold air aisles, this prevents mixing, improves cooling efficiency, and reduces energy consumption.

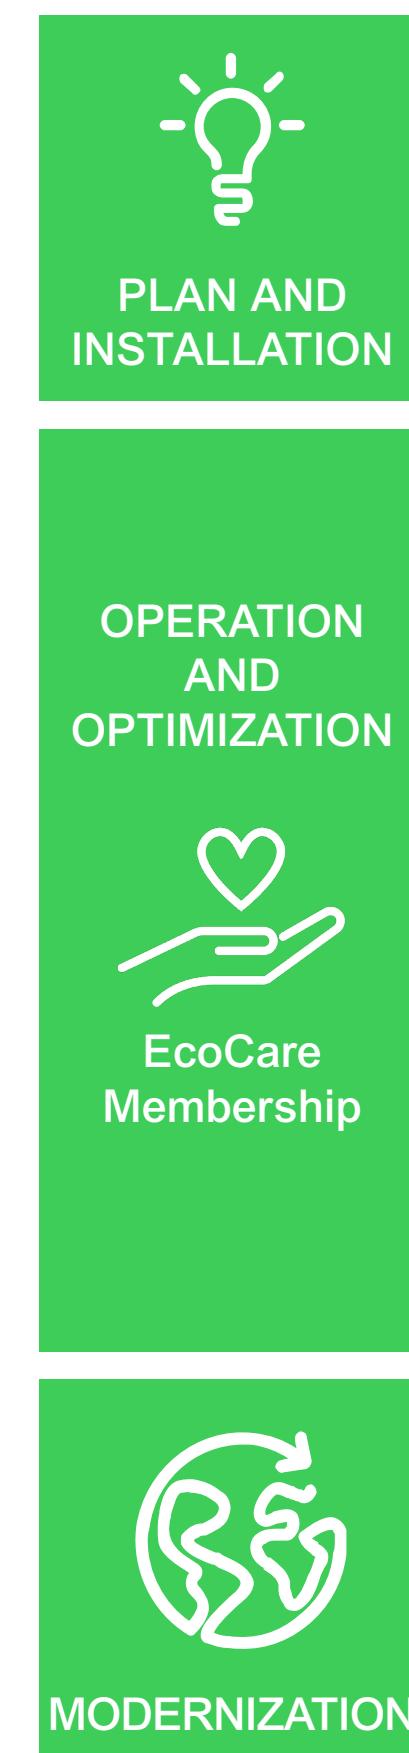

The **Motivair ChilledDoor** and **In-Rack Coolant Distribution Unit** deliver scalable, high-efficiency cooling directly at the rack level, enabling 100% heat removal and real-time thermal management for high-density IT environments.

SERVICES

Our **services** help to operate and maintain complex IT environments over the entire solution lifecycle.

We help you get your IT project off the ground with:

- Startup Services – Smooth system setup from day one
- Operator Training – Empower your team with the right skills
- Asset Configuration – Tailored setup for optimal performance

We bring you peace of mind with **24/7 support from our experts**:

- EcoStruxure Asset Advisor – Cloud-based remote monitoring by our professionals, 24/7
- Extended Warranties – Covering parts and batteries for worry-free ownership
- Onsite Extended Warranties – Extend the warranty including onsite preventive maintenance
- Onsite Services Plans – Our specialists come to you when needed
- EcoCare Services Membership* – Proactive asset performance management with AI-powered condition-based maintenance, 24/7 remote monitoring, and expert support.
- **Comprehensive coverage:** Traditional Data Centers, Prefab-Modular Data Centers, stand-alone and multiple 1phase and 3phase UPS, PDUs, Cooling InRoom, InRow, DX, CX, Chillers, Liquid cooling CDU.

We keep you one step ahead of issues with:

- Preventive Maintenance – Regular checkups to avoid downtime
- Ad-hoc Services – On-demand support whenever you need it

We help you to upgrade and go green

A single asset or your entire fleet, with the latest, most sustainable technologies

* EcoCare 1phase and 3phase availabilities based on geographies.

Simplify your IT rack setup with this reference guide – designed to streamline your configuration process.

Commercial & Tertiary Environment		Standard IT Environment

In this next section, we explain how our solutions can complement your IT project designs and resolve common onsite issues.

Try it now

The ideal IT setup for Stock Rooms

Some tips for your solution placed in the Stock room:

- 1 **Save Space:** Use compact wall-mounted racks and slim Li-ion UPS units.
- 2 **Stay Cool:** Choose enclosures with built-in fans and dust filters.
- 3 **Secure It:** Lock the rack, mount it on the wall, and add security camera.
- 4 **Make It Easy for Non-IT Staff:** Use devices with simple, readable interfaces, try SmartConnect for easy remote monitoring and management.
- 5 **Ensure you're covered:** Choose extended warranties for peace of mind.
- 6 **Get peace of mind:** Let us monitor and manage everything for you with EcoStruxure Asset Advisor (EAA).

* For advanced, cloud-based monitoring at scale — go with EcoStruxure IT Expert.

The ideal IT setup for Open Offices

Some tips for your solution placed in the Open Office:

- 1 Stay Quiet & Stylish:** Use a soundproof, modern rack with noise reduction.
- 2 Keep It Cool:** Built-in fan ventilation handles airflow in tight spaces.
- 3 Monitor the Environment 24/7:** Add NetBotz for environmental monitoring — especially on weekends and holidays.
- 4 Make It Easy for Non-IT Staff:** Use devices with simple, readable interfaces, include IT Expert for full remote visibility and management.
- 5 Secure It:** physical security is even more critical in open space - use locking doors and sensors.
- 6 Get peace of mind:** Let us monitor and manage everything for you with EcoStruxure Asset Advisor (EAA).

* For advanced, cloud-based monitoring at scale — go with EcoStruxure IT Expert.

The ideal IT setup for Network Closets

Some tips for your solution for networking equipment:

- 1 **Mount Smart, Save Space:** Use wall-mounted racks to keep equipment off the floor and out of the way.
- 2 **Choose the Right UPS for the needs:** Line-interactive UPS is perfect for non-critical systems.
- 3 **Keep Cables Under Control:** Integrate cable management trays and guides to avoid tangles and simplify maintenance.
- 4 **Secure the Setup:** Secure with locks and door sensors.
- 5 **Stay in Control:** Use a switched PDU to power devices on/off in sequence and prevent overloads.
- 6 **Monitor from Anywhere:** Enable remote visibility and management with SmartConnect—perfect when no IT staff is on-site.
- 7 **Be sure you're Covered:** Choose extended warranties for peace of mind.

The ideal IT setup for High-performance server rooms

Some tips for your solution for High-performance server rooms:

- 1** **Don't compromise on Rack:** Go with NetShelter SX 2nd Gen racks with higher load capacity and superior airflow.
- 2** **Allow Zero Downtime:** Use an Online UPS with zero transfer time to ensure uninterrupted power for critical equipment.
- 3** **Be Smart with Power Control:** Install Switched with metering by outlet PDUs to monitor and manage power usage intelligently at the outlet level.
- 4** **Prioritize Security:** Combine physical security (access control, cameras) with software-based protections (monitoring, alerts).
- 5** **Centralize Management:** Use advanced infrastructure management software to handle complex systems efficiently.
- 6** **Plan for Redundancy:** For mission-critical applications, build in redundancy across power, cooling, and network systems.
- 7** **Protect your Data:** Use PowerChute for safe shutdowns, protecting data and enabling unattended start-up when power is restored.
- 8** **Think about Cooling:** Consider Inrow cooling and Aisle containment – standard air conditioning may not be enough.

The ideal IT setup for High-performance server rooms

Type	Part Number	Description	Quantity
Racks and Accessories	AR3300B2	APC NetShelter SX Server Rack Gen 2, 42U, 1991H x 600W x 1200D mm, with Sides, Black	1

The ideal IT setup for Basic server rooms

Some tips for your solution for Basic server rooms:

- 1 Keep It Simple with Racks:** You may not need advanced features—Easy Racks can be a reliable, cost-effective choice.
- 2 Allow Zero Downtime:** Even in a basic setup, uptime matters. Use an Online Easy UPS for zero transfer time and reliable backup.
- 3 Be Smart with Power Control:** Go with Switched Easy PDU for essential control and monitoring without complexity.
- 4 Monitor the Environment:** Don't overlook temperature and humidity monitoring—it's key to preventing hardware issues.
- 5 Manage with the Right Tool:** Even small setups benefit from visibility. Use centralized infrastructure software to stay in control as things grow. With NMC, 1st year subscription is included.
- 6 Get peace of mind:** Let us monitor and manage everything for you - with EcoStruxure Asset Advisor (EAA).

	Door status	Yes	Yes	Yes	Yes	No
	Camera	Yes	No	No	Yes	No

A close-up, slightly blurred photograph of two people in business attire shaking hands. The person on the left is wearing a dark suit and a white shirt. The person on the right is wearing a dark suit and a light-colored shirt. The background is out of focus, showing some warm lighting and possibly a window. The overall mood is professional and positive.
