

EuroForm® PowerFlash 200

Flash Memory Storage for your printer

The EuroForm PowerFlash 200 is a cost effective way of controlling your printed output to ensure that your corporate design guidelines are followed and of streamlining your printing processes.

You already know the problem; a telephone number is changed or the legal department makes a small adjustment of the terms and conditions and suddenly a lot of your pre-printed writing paper is out of date and useless. Or maybe a mailing action with a product photograph and a scanned signature takes a long time to print and ties up the whole network.

Have you considered that you could make cost and time savings by shifting the responsibility to your printer? The EuroForm PowerFlash 200 do just that. By offering you a secure, non-volatile memory in your printer, you can store all sorts of relevant, reusable data where you need it, without filling up your store-room or your computer network. And while the management of the data in your EuroForm PowerFlash 200 is easy, you can use it for all sorts of quasi-permanent data, from forms to fonts, from legal text to logos.

How does it work?

The EuroForm PowerFlash 200 is inserted in your HP LaserJet printer like any other memory extension. Using pre-defined code sequences you can then store data and macros securely in the memory, data that is maintained even when the printer is turned off. The data can be managed from any computer with access to the printer – the easiest way is to use the EuroForm Forms and Font Manager software (described in its own data sheet).

By using your own specific codes in the job that you send to the printer, you can trigger the stored data. This can be the parsing of the incoming data to fill out a pre-stored form, adding a company logo in the correct place on a letter, or adding a barcode or your terms and conditions to an invoice – the possibilities are limited only by your imagination.

Characteristics

- Store special or corporate typefaces, bitmaps, logos or even signatures for consistent and immediate use on the printer
- Reduce network load
- Enabling cost savings through elimination of the need for pre-printed forms
- Easy remote management and update of content
- Increased security through password protection of content

Areas of application

- Implementation of electronic forms and letterheads
- Make logos, signatures, special fonts, and images available directly from the printer

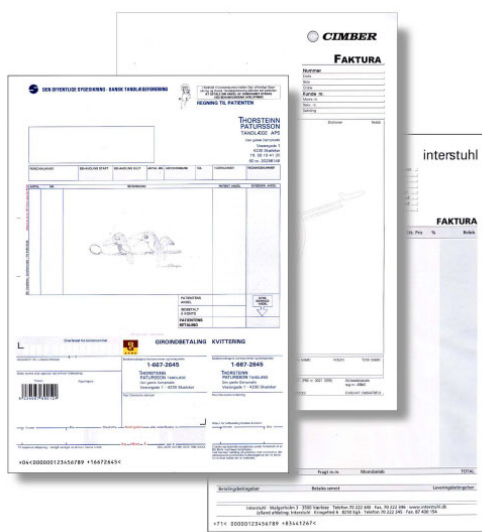

Special Features

- Easy to install – just plug into a free memory slot in the printer
- Immediate use with the included EuroForm Forms and Font Manager software
- Cross-platform used independently of operating system and application (e.g. SAP R/3, XAL, etc.)

Supported printers

Most HP LaserJet printers, Color LaserJet printers and MFP (Multi Function Printer) devices are supported.
